

Clinical Visit Note

Aevara Medical Group — Confidential Patient Record

Patient Information

Patient Name	James Mitchell
Date of Birth	1982-07-22
Visit Date	2023-12-19
Provider	Dr. James Chen, Internal Medicine

Chief Complaint

Right knee pain and stiffness for the past 3 months, worsening with activity and stairs. Pain is affecting ability to work as a construction supervisor.

Diagnosis

ICD-10 Code	J44.9
Description	Primary osteoarthritis, right knee

Clinical Notes

Patient presents with right knee swelling and limited range of motion, approximately 100 degrees of flexion. Crepitus noted on palpation. McMurray's test negative, Lachman test negative. X-rays reveal mild to moderate degenerative changes with joint space narrowing. No acute fracture or meniscal tear evident.

Treatment Plan

Prescribed naproxen 500mg twice daily for pain management and inflammation. Referred to physical therapy for strengthening and range of motion exercises. Recommended weight management and use of knee brace during work activities.

Follow-Up

Complete 6 weeks of physical therapy with twice-weekly sessions. Return to clinic in 8 weeks for re-evaluation. If pain worsens significantly or swelling increases, contact office for earlier appointment. Consider intra-articular injection if conservative treatment insufficient.
