

## Clinical Visit Note

Aevara Medical Group — Confidential Patient Record

### Patient Information

|               |                                |
|---------------|--------------------------------|
| Patient Name  | Sarah Williams                 |
| Date of Birth | 1996-11-08                     |
| Visit Date    | 2024-04-20                     |
| Provider      | Dr. Sarah Mitchell, Cardiology |

### Chief Complaint

Patient presents with right knee pain and stiffness that has worsened over the past 3 months, particularly with stairs and prolonged standing.

### Diagnosis

|             |                                    |
|-------------|------------------------------------|
| ICD-10 Code | J06.9                              |
| Description | Primary osteoarthritis, right knee |

### Clinical Notes

Physical examination reveals mild effusion and crepitus in right knee with positive Lachman test. Range of motion is 0-110 degrees with pain at terminal extension. X-rays show moderate degenerative changes with joint space narrowing. Patient has a BMI of 28 and reports sedentary work environment.

### Treatment Plan

Initiate conservative management with physical therapy 2-3 times weekly focusing on quadriceps strengthening and range of motion exercises. Prescribe celecoxib 200mg twice daily for pain management. Recommend weight loss of 5-10 pounds and activity modification.

### Follow-Up

Follow up in 6 weeks to assess response to conservative treatment. Complete physical therapy course and report any worsening of symptoms. Consider corticosteroid injection if symptoms persist after 6 weeks of conservative therapy.
