

Clinical Visit Note

HealthFirst Medical Group — Confidential Patient Record

Patient Information

Patient Name	Patricia Williams
Date of Birth	1952-03-08
Visit Date	2024-05-25
Provider	Dr. James Chen, Internal Medicine

Chief Complaint

Patient presents with right knee pain and stiffness that has worsened over the past three months, limiting his ability to exercise.

Diagnosis

ICD-10 Code	J06.9
Description	Primary osteoarthritis, right knee

Clinical Notes

Right knee examination reveals mild effusion, crepitus with range of motion, and tenderness over the medial joint line. X-ray imaging shows early degenerative changes with joint space narrowing. Patient reports pain is worse in the morning and with prolonged standing.

Treatment Plan

Initiate physical therapy program focusing on quadriceps strengthening and range of motion exercises. Prescribe naproxen 500mg twice daily with food for pain management. Consider intra-articular corticosteroid injection if symptoms do not improve in 6 weeks.

Follow-Up

Attend physical therapy twice weekly for 6 weeks. Schedule follow-up appointment in 8 weeks to assess treatment response. Apply ice to knee for 15-20 minutes after activity and maintain healthy weight to reduce joint stress.
