

Clinical Visit Note

Aevara Medical Group — Confidential Patient Record

Patient Information

Patient Name	Sarah Williams
Date of Birth	1996-11-08
Visit Date	2023-08-22
Provider	Dr. James Chen, Internal Medicine

Chief Complaint

Patient reports 5 days of sore throat, nasal congestion, and mild cough with low-grade fever up to 100.8°F.

Diagnosis

ICD-10 Code	E11.9
Description	Acute upper respiratory infection, unspecified

Clinical Notes

Vital signs show temperature of 100.2°F, heart rate 88 bpm, respiratory rate 16. Oropharynx is mildly erythematous with no exudate. Nasal mucosa is edematous. Lungs are clear to auscultation bilaterally. Rapid strep test is negative. White blood cell count is normal at 7,200/ μ L suggesting viral etiology.

Treatment Plan

Supportive care with rest, fluids, and acetaminophen 650mg every 6 hours as needed for fever and pain. Recommend saline nasal drops for congestion and honey for cough suppression. Avoid antibiotics given negative strep test and viral presentation.

Follow-Up

Symptoms should improve within 7-10 days. Return to clinic or call if fever persists beyond 5 days, symptoms worsen, or difficulty breathing develops. May return to work/school once fever-free for 24 hours without medication.
