

Clinical Visit Note

HealthFirst Medical Group — Confidential Patient Record

Patient Information

Patient Name	Michael Chen
Date of Birth	1966-11-22
Visit Date	2023-05-10
Provider	Dr. Rebecca Thompson, Family Practice

Chief Complaint

Patient reports persistent elevated blood pressure readings at home over the past two weeks despite current medication regimen.

Diagnosis

ICD-10 Code	J45.50
Description	Essential (primary) hypertension

Clinical Notes

Blood pressure measured at 158/94 mmHg in office setting. Patient reports good medication adherence with current lisinopril 10mg daily. No signs of end-organ damage noted on physical examination. EKG shows normal sinus rhythm with no acute changes.

Treatment Plan

Increase lisinopril dosage from 10mg to 20mg daily. Add amlodipine 5mg once daily for additional blood pressure control. Recommend dietary sodium restriction and regular aerobic exercise.

Follow-Up

Return in 4 weeks for blood pressure recheck and medication adjustment assessment. Monitor blood pressure daily at home and maintain a log. Contact office if systolic BP exceeds 160 mmHg on multiple readings.
