

Clinical Visit Note

HealthFirst Medical Group — Confidential Patient Record

Patient Information

Patient Name	Sarah Johnson
Date of Birth	1990-05-15
Visit Date	2023-07-18
Provider	Dr. Rebecca Thompson, Family Practice

Chief Complaint

Patient reports increased thirst and frequent urination over the past month with occasional fatigue despite lifestyle modifications.

Diagnosis

ICD-10 Code	M54.5
Description	Type 2 diabetes mellitus without complications

Clinical Notes

Fasting glucose level measured at 178 mg/dL, HbA1c at 8.2%, indicating suboptimal glycemic control. Patient currently on metformin 500mg twice daily. BMI is 29.5 kg/m². No signs of diabetic neuropathy or retinopathy on examination.

Treatment Plan

Increase metformin dosage to 1000mg twice daily to improve glucose control. Add glipizide 5mg once daily in the morning. Refer to nutritionist for comprehensive diabetes meal planning and weight management counseling.

Follow-Up

Return in 12 weeks for repeat HbA1c testing and medication efficacy assessment. Monitor fasting blood glucose daily and maintain a food diary. Attend diabetes education class and schedule annual eye and foot examinations.
